Calgary, AB | 403-918-8778 | joey.ahkiow@gmail.com | www.linkedin.com/in/joeyah-kiow | joeya20.github.io

Education

University of Calgary | Calgary, AB

B.Sc. in Electrical Engineering, GPA 3.74

Sep. 2018 – Present

Expected Graduation: May 2023

- Minor in Computer Engineering
- Relevant coursework: Digital Systems Design, Digital Electronic Circuits, Analog Electronic Circuits, Computer Organization

Skills

Programming: Java, Python, C#, SQL, C, C++, VHDL, Verilog, SystemVerilog

Hardware: FPGA, PIC microcontroller, Arduino, MIPS processor

Software: Intel Quartus Prime, ModelSim, NI Multisim, LTSpice, SolidWorks, GitHub, Power BI, Excel (Power Query, VBA)

Communication: Design proposals, technical reports, instruction manuals, presentations

Experience

TC Energy | Calgary, AB

May 2021 – Present

Field Data Program Management Intern

- Supported the management of the Field Data program by revising official engineering documents, assisting internal and external stakeholders, maintaining and ensuring data quality, and completing various improvement initiatives
- Developed a new reporting tool adopted by the Pipe Integrity department (~200 employees) to automate the escalation of reporting, resulting in 60-70% timesaving for management
- Created and managed various Power BI reports to enable data-driven decision making and improve workflow processes

Canadian Natural Resources Limited (CNRL) | Calgary, AB

May 2020 – Aug. 2020

Data Provisioning Intern

- Developed and implemented SQL scripts to load, transform, and correct data for internal stakeholders
- Developed two applications using C# and .NET 4.8 to automate (1) the deployment of SSRS reports, and (2) the management of our Tableau server groups and users

University of Calgary | Calgary, AB

May 2019 – Aug. 2019

Undergraduate Research Assistant

- Researched the set of parameters that would yield the most accurate output when completing least-squares adjustments for stereo-photogrammetry purposes
- Completed a report detailing my research, work completed, my findings, and potential future work

Projects

Countdown Timer

Feb. 2022

Personal Project

- Designed and implemented a countdown timer using SystemVerilog and the Terasic DE10-Lite FPGA board
- Implemented using a Mealy Finite State Machine (FSM), and utilized pushbuttons and switches as inputs, and seven segment displays as outputs

REJOY Fitness Tracker

Jan. 2021 – Apr. 2021

Course Project

Arduino-based system that measures and stores data such as blood oxygen level, heart rate, and steps taken

- Developed a fully integrated device that utilized an SD card module, a heart rate and blood oximetry sensor, a rotary encoder, an accelerometer, an RTC, a LiPo battery, an OLED display and a BLE module
- Utilized standard protocols such as SPI and I2C to communicate between the Arduino and the peripherals

Proximity-controlled buzzer, LEDs, and 7 segment displays

Jan. 2021 – Apr. 2021

Course Project

- Developed and simulated using VHDL, Quartus and ModelSim, and implemented on the Terasic DE10-Lite FPGA board
- Used an ADC to interface a proximity sensor, and outputted the readings to 7-segment displays in voltage or distance units, and controlled the frequency of a buzzer and the brightness of an LED array using PWM
- Utilized shift registers to store the last 256 proximity sensor readings and averaged them to reduce the effect of outliers and stabilize the system input
